

2835 UVA LED Series Datasheet

Features:

- Slim Size SMD Package: Design Flexibility
- High Lumen Output and High Radiant Flux
- Stable Performance & Great Color Uniformity
- UV Wavelength 365-420nm
- Copper Base + UV Special Silicone Gel...
- Environmental Friendly; ROHS Compliance
- Customized Service Available

Applications:

- LED Aquarium Light, LED Plant Growing Light..
- LED Germicidal Lamp, LED Mosquito-lured Lamp...
- LED Nail Lamp, Currency Detector...
- Curing, Exposing, Beauty, Medical Equipment...

PRODUCT NAMING RULES

LKL	XXXX	XX	X	X	XXX
LKL	Type	Light Color	Chip QTY	Beam Angle	Brightness
LEKOLED	2835	V1: 365-375nm	1: 1EA	0: 120°/140°	300M: 300-500mcd
		V2: 380-390nm	2: 2EA		600M: 600-800mcd
		V3: 390-400nm	3: 3EA		800M: 800-1000mcd
		V4: 400-410nm		1500M: 1500-1800mcd
		V5: 410-420nm		
				

CHARACTERISTICS

Specifications (IF=60mA, Tc=25°C)

Light Color	Wavelength (nm)	2.8-3.4V @60mA	Model No.
		Luminous Flux	
UV	365-370	300-500MCD	LKL-2835V110300M
UV	380-390	500-600MCD	LKL-2835V210500M
UV	390-400	600-800MCD	LKL-2835V310600M
UV	400-410	600-800MCD	LKL-2835V410600M
UV	410-420	800-850MCD	LKL-2835V510800M

Specifications (IF=150mA, Tc=25°C)

Light Color	Wavelength (nm)	2.8-3.4V @150mA	Model No.
		Luminous Flux	
UV	365-370	600-800MCD	LKL-2835V110600M
UV	380-390	800-900MCD	LKL-2835V220800M
UV	390-400	1500-1800MCD	LKL-2835V3201500M
UV	400-410	1500-1800MCD	LKL-2835V4201500M
UV	410-420	1500-1800MCD	LKL-2835V5201500M

CHARACTERISTICS

Absolute Maximum Ratings at T_j=25°C

Parameters	Symbol	Maximum Performance
Power Dissipation 1	P _D	0.2W
Power Dissipation 2	P _D	0.5W
Forward Current 1	I _F	60mA
Forward Current 2	I _F	150mA
Peak Pulse Current 1	I _{FP}	100mA
Peak Pulse Current 2	I _{FP}	200mA
Reverse Voltage	V _R	5V
Viewing Angle	2θ 1/2	120°
Operating Temperature	T _{OPR}	-30 ~ +75°C
Storage Temperature	T _{STG}	-40 ~ +85°C
Junction Temperature	T _j	115°C
Soldering Temperature	T _{SLD}	Reflow Soldering: 230°C or 260°C for 10Sec

Electrical/ Optical Characteristics at T_j=25°C

Parameters	Symbol	Min	Type	Max	Unit	Condition
Forward Voltage	v _F	3.0	---	3.6	V	I _F =60mA I _F =150mA
Peak Wavelength	λ _p	365	---	420	nm	I _F =60mA I _F =150mA
Reverse Current	I _R		10		μA	V _R =5V
Thermal Resistance	R _{th j-sp}		8		°C/W	I _F =350mA
Electrostatic Discharge	ESD		2000		V	HBM

RELATIVE SPECTRAL POWER DISTRIBUTION

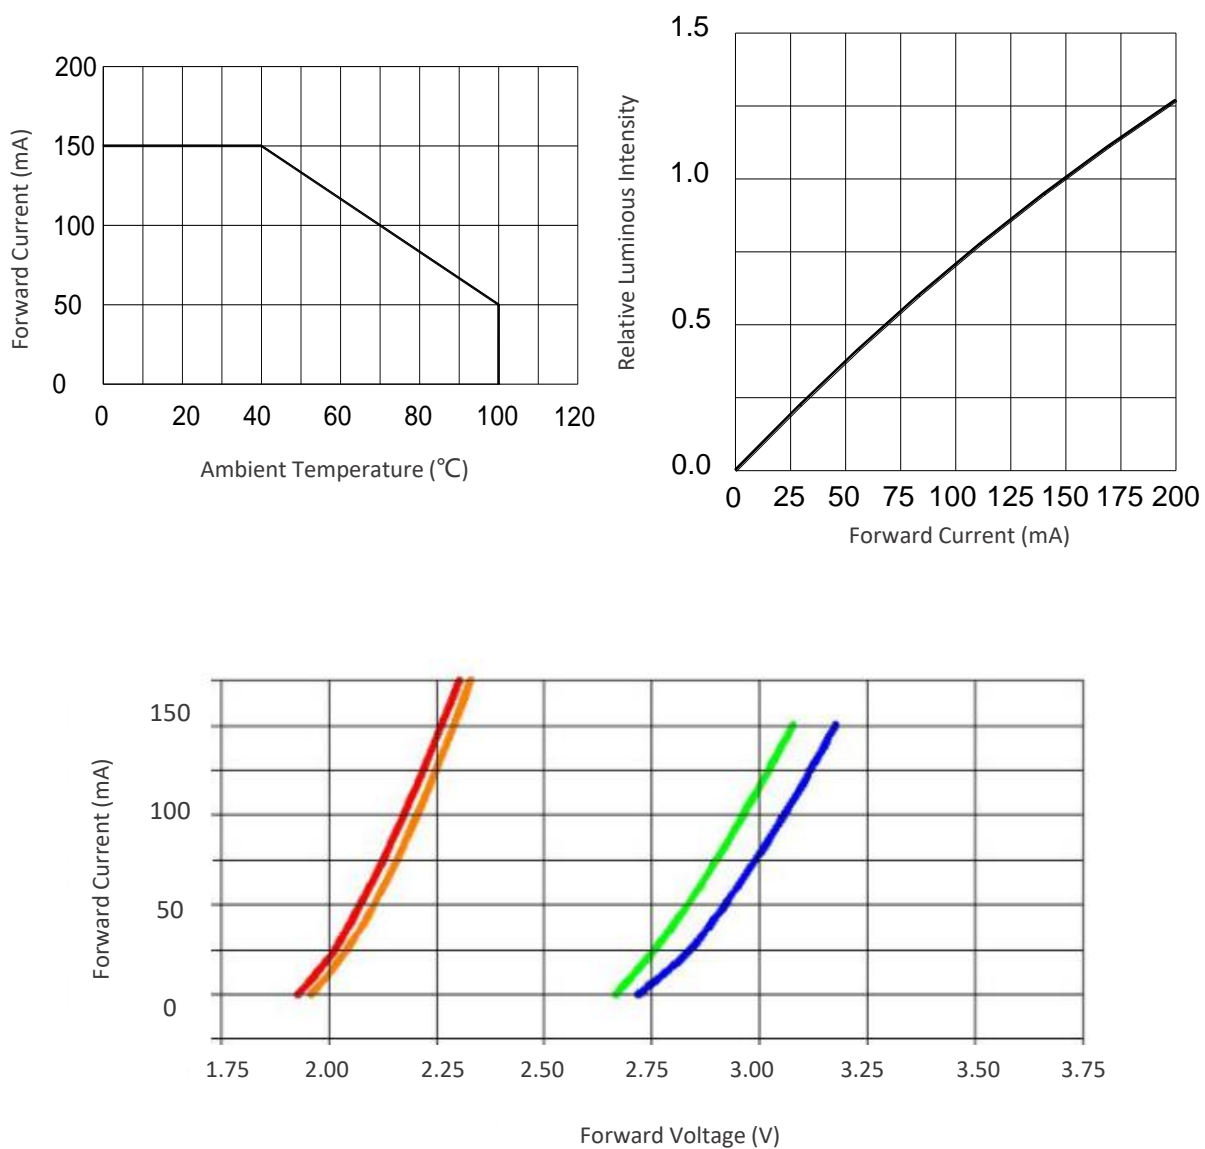

TYPICAL CHARACTERISTIC CURVES

Specifications (IF=60mA, Tc=25°C)

TYPICAL CHARACTERISTIC CURVES

Specifications (IF=150mA, Tc=25°C)

RELIABILITY TESTS

Test Items	Test Conditions	Sample QTY	Ac/Re
Aging Test	IF=60-150mA, Ta=25°C x6000hrs	22	0/1
	IF=60-150mA, Ta=85°C x6000hrs	22	0/1
High Temperature Storage	100°C x1000hrs	22	0/1
Low Temperature Storage	-40°C x1000hrs	22	0/1
High Temp & Humidity	IF=60-150mA, 85°C, 85% RH for 6000hrs	22	0/1
Temperature Shock	-40°Cx30 min & +100°Cx30 min, 100cycle	22	0/1
ESD(HBM)	2000V HBM/ 1 Time	10	0/1

Criteria for Judging LED Failure (Tc= 25°C)

Items	Symbol	Test Conditions	Criteria for Judging LED Failure
Forward Voltage	VF	IF=60-150mA	>U x 1.1
Reverse Current	IR	VR=5V	IR>/= 10μA
Lumen	ΦV	IF=60-150mA	<S x 0.7

U refers to max value; S refers to initial value.

Notes: Judging criteria based on Tc=25°C.

TYPICAL CHARACTERISTIC CURVES

REFLOW SOLDERING PROFILE

Profile Features	Lead-free solder	Lead solder	Soldering by Manual
Ramp-up Speed(Ts max to Tp)	3 °C/ second max.	3 °C/ second max.	Max. temperature: 350°C 3 seconds/1 time
Preheat: Min. Temperature(Tsmin)	150 °C	100 °C	
Preheat: Max. Temperature(Tsmax)	200 °C	150 °C	
Preheat: Time (tsmin to tsmax)	60~180 seconds	60~120 seconds	
Temperature to Keep: (Tl)	217 °C	183 °C	
Time to Keep: (tL)	60~150 seconds	60~150 seconds	
Peak Temperature (Tp)	260 °C	215 °C	
Time within the peak temperature (tp)	20~40 seconds	10~30 seconds	
Ramp-down Speed	6°C/ second max.	6°C/ second max.	
Time to the peak Temperature	8 minutes max.	6 minutes max.	

DIMENSIONS

Unit: mm

Notes :

*All dimensions are in millimeters.(tolerance: ± 0.2 mm)

*The appearance and specifications of the product may be changed for improvement without notice.

* 1: Anode(+) 2: Cathode(-)

PACKAGING

Tape Specifications (Units : mm)

Reel Dimensions

Moisture Resistant Packaging

PRECAUTIONS

Storage

1. Moisture proof and anti-electrostatic package with moisture absorbent material is used, to keep moisture to a minimum.
2. Before opening the package, the product should be kept at 30°C or less and humidity less than 60% RH, and be used within a year.
3. After opening the package, the product should be stored at 30°C or less and humidity less than 10%RH, and be soldered within 24 hrs (1day). It is recommended that the product be operated at the workshop condition of 30°C or less and humidity less than 60%RH.
4. If the moisture absorbent material has faded away or the LEDs have exceeded the storage time, baking treatment should be performed based on the following condition: (80±5)°C for 24 hours.

Static Electricity

1. Static electricity or surge voltage damages the LEDs. Damaged LEDs will show some unusual characteristics such as the forward voltage becoming lower, or the LEDs do not light at the low current, even not light.
2. All devices, equipment and machinery must be properly grounded. At the same time, it is recommended that wrist bands or anti-electrostatic gloves, anti-electrostatic containers be used when dealing with the LEDs.

Vulcanization

LED curing is due to sulfur being in brackets and the +1 price of silver in the chemical reaction generated Ag₂S in the process. It will lead to the capacity of reflecting of silver layer reducing, light color temperature drift and serious decline, seriously affecting the performance of the product. So we should take corresponding measures to avoid vulcanization, such as to avoid using sulphur volatile substances and keeping away from high sulphur content of the material.

Design Consideration

1. In designing a circuit, the current through each LED must not exceed the absolute maximum rating specified for each LED. In the meanwhile, resistors for protection should be applied, otherwise slight voltage shifts will cause big current changes, burn out may happen.
2. It is recommended to use Circuit A which regulates the current flowing through each LED rather than Circuit B. When driving LEDs with a constant voltage in Circuit B, the current through the LEDs may vary due to the variation in Forward Voltage (VF) of the LEDs. In the worst case, some LED may be subjected to stresses in excess of the Absolute Maximum Rating.

3. Thermal Design is paramount importance because heat generation may result in the characteristics decline, such as brightness decreased, color changed and so on. Please consider the heat generation of the LEDs when making the system design.

PRECAUTIONS

Safety Advice For Human Eyes

Viewing direct to the light emitting center of the LEDs, especially those of great Luminous Intensity will cause great hazard to human eyes. Please be careful.

The safe temperature for LEDs working

The high temperature will make the LEDs' Luminous Intensity decreased radically, if LEDs worked in hoteyes. Please be careful. environment for a long time, they will be disabled easily. When LEDs are working in a closed array, we suggest that the LEDs' surface temperature should be lower than 55°C and the legs' temperature should be lower than 75°C.

Others

1. When handling the product, touching the encapsulant with bare hands will not only contaminate its surface, but also affect on its optical characteristics. Excessive force to the encapsulant might result in catastrophic failure of the LEDs due to Die breakage or wire deformation. For this reason, please do not put excessive stress on LEDs, especially when the LEDs are heated such as during Reflow Soldering.

2. The epoxy resin of encapsulant is fragile, so please avoid scratch or friction over the epoxy resin surface. While handling the product with tweezers, do not hold by the epoxy resin, be careful.
